FAQ's

+ Do you take back-ups of my website?

We make back-ups of your website daily during the night to prevent interrupted service. We store all back-ups for 30 days, which means if you need to revert you will have 30 to choose from. The option to add hourly back-ups is an additional £5 per site, these are also stored for 30 days.

+ What is Cloudflare Protection and why do I need it?

Cloudflare is a global network designed to make everything you connect to secure, fast and reliable. Cloudflare accelerates your website plus instantly turns on performance and security services such as CDN, WAF, DDOS protection, bot management, API security, web analytics, image optimisation, stream delivery, load balancing, SSL and DNS. Cloudflare has built security into every component, blocking an average of 70 billion threats per day, including some of the world's largest DDoS attacks ever recorded.

+ What are proof sites?

As part of some of our plans, we offer the opportunity to have a concurrent existing duplication of your website that will host your newest updates before releasing them to the live server. This allows the opportunity to add and review codebase updates without them interrupting your website's users' experience.

+ What happens if I exceed my data limit?

We currently have a soft limits usage, which means there will be no disruption to your service. We will send you a message to let you know you are hitting your plan limit and that you should consider upgrading to a plan with a bigger storage plan. We don't charge 'overages', however, if you have not upgraded after 3 consecutive warnings you will be moved up to the next suitable plan automatically as part of your contract.

FAQ's

+ Why should I pay for Managed Hosting?

As a dedicated managed WordPress host is going to take care of all the technical details, so you can get back to growing your business. These are the what makes managed WP hosting a business necessity:

Managed caching and performance

We handle caching for you at the server level, using super-fast servers to begin with, and even work individually with our customers to further optimise their sites for the best performance.

Managed security

We proactively scan and block malware and hacking attempts. We do all of this at the server level, without the need for any plugins or configuration on the part of the customer. In the unlikely event that your site is hacked, we will fix it for you, free of charge.

Managed software updates

We will work with you to make sure your site is always running the latest and greatest WordPress software to prevent interruptions in service and security holes.

Expert WordPress support

Our team of WordPress experts goes beyond what the average managed hosting company will help with because we are a company that truly cares about our customers.

+ What is an SSL Certificate?

Have you ever noticed some URLs start with http://, while others start with https://? Where does the extra "s" come from, and what does it mean? In simple terms, the extra "s" means your connection to that website is secure and encrypted which means any data shared with that website is shared safely. The technology behind the "s" is what we call SSL, which stands for "Secure Sockets Layer". Consumers will want to see this when visiting a website, that's why we include it as standard with any package.

+ What is your refund / cancellation policy?

We are so confident in the quality of our services we offer a 30-day money-back guarantee. If you are not completely satisfied within 30 days of purchasing a new software support plan, you may cancel your plan by requesting a full refund by sending an email to accounts@sourcecodestudio.co.uk.

Additional Services

Website

We create beautiful conversion focused websites to suit your budget. We have partnered with industry leaders & start-ups to create meaningful digital experiences through bespoke WordPress development.

Software

Our software doesn't require expensive "per user" costs or require third-party risk management. With bespoke web-based software we can provide maximum accessibility keeping you in control.

Branding

We create modern, high-quality brand identities that engage with your audience. Our branding begins with a deep understanding of who you are combined with our user experience focused discovery process to increase engagement with your audience.

Mobile Apps

We use Xamarin cross-platform development for Android Apps for Google Play and Apple iOS App Store. We create innovative products that will meet and exceed your goals.

SEO

We don't promise "number 1 on Google", we know SEO takes time and can always be improved. We take your website through an audit process, build a solid foundation and grow your presence online.

Let's Talk!

If you have any questions we would love to speak to you about your project. We work with clients of all different sizes and from a range of industries, so don't be shy!
